

SunBlockTerminal(SBT) Company Introduction

SUN MOBILE
COMMERCE

01. INTRODUCTION

SUNBLOCKTERMINAL (SBT)

Smarter Blockchain Life Platform, SBT

sunblcokterminal(SBT) provides a smart/safe/speedy blockchain payment system with its own developed mainnet.

E-commerce such as payment and ticketing using smartphones and personal information terminals (PCs) can be safely exchanged for services and products in a virtual space using a blockchain network to ensure immediacy, convenience, and individuality.

Smart

sunblcokterminal(SBT) provides an integrated payment environment with a global blockchain payment system.

Safe

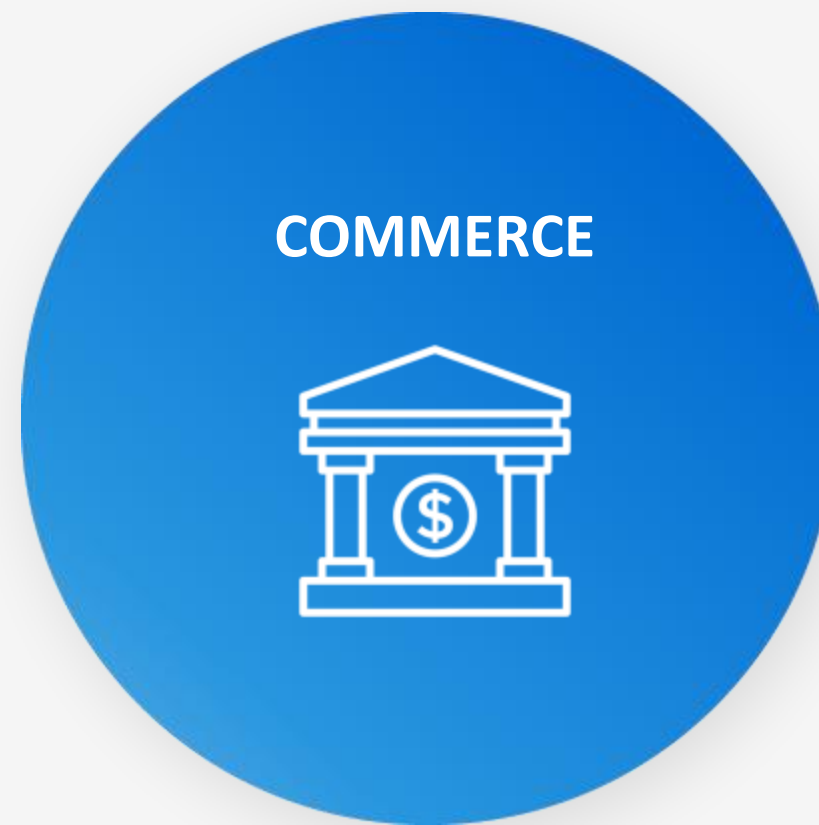

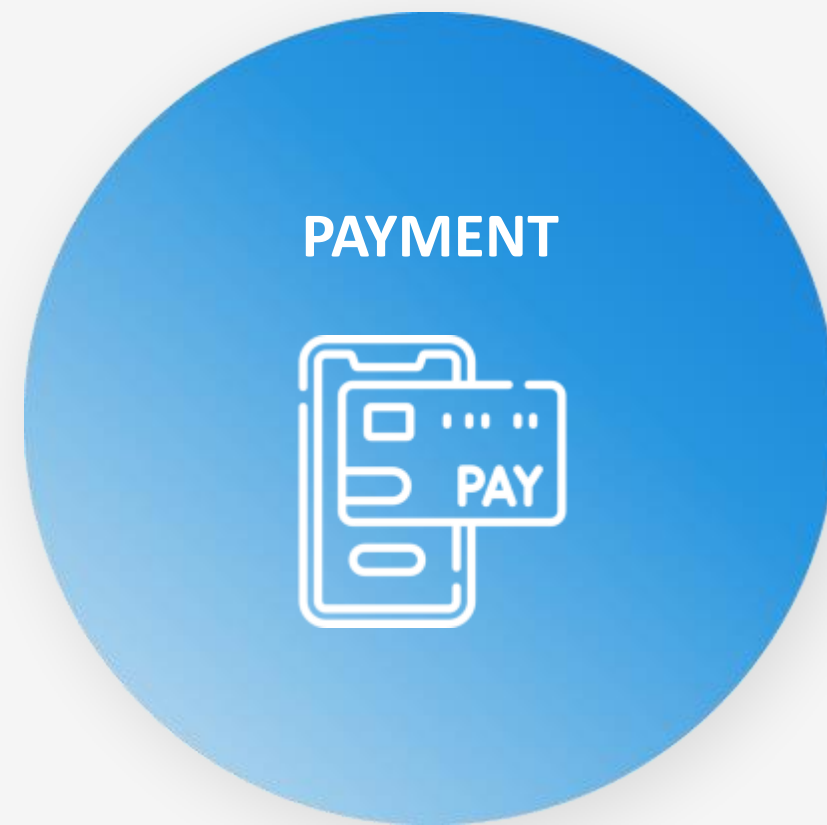

sunblcokterminal(SBT) uses an encrypted distributed architecture that provides reliable real-time verification of transactions without intermediaries such as banks and exchanges.

Speedy

Packets transactions with sunblcokterminal(SBT)'s spider routing method and uses multi-path transport protocols to provide a smart, secure, and fast service experience anywhere in the world with high throughput routing on PCNs.

02. Company Vision

The SBT platform continues to expand from global payments to areas necessary for user lifestyles such as shopping, gifticons, and lectures. All economic activities of virtual assets leading to SBT implement an integrated global payment system that has never existed before.

03. Steps of SBT

Sunblockterminal(SBT) continue to expand.

04. Contents

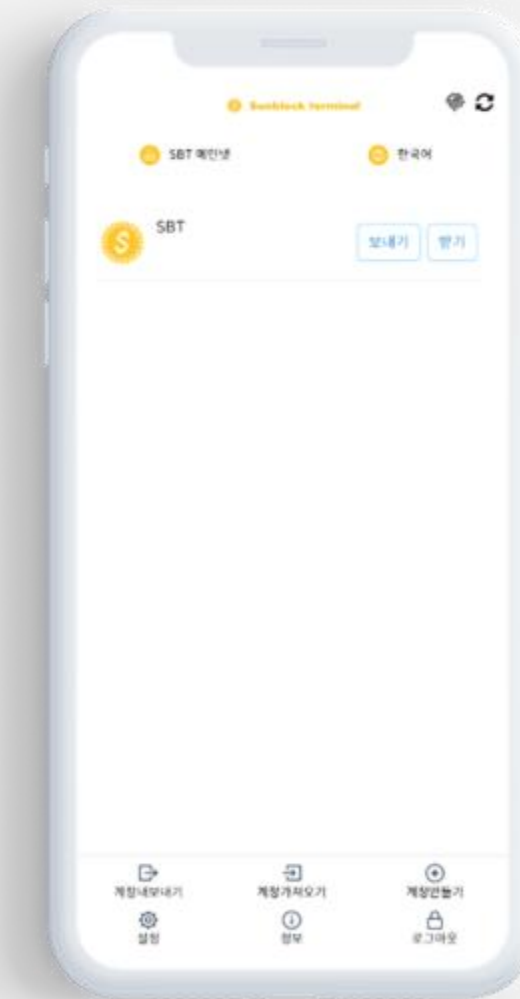

05. Function

DApp

Anyone can use DApps without restrictions through SBT nodes spread around the world by loading DApps on SBT.

SBT Wallet

SBT Wallet is the key to making all SBT's services easier to use. SBT wallets based on simple wallet designs integrate platforms such as sales, purchases, and exchanges to further simplify user experience.

06. SBT TECHNOLOGY

Blockchain

SBT's payment as a service operates on the basis of a blockchain platform and provides professional services such as card issuance, payment clearing, cross-border payments, spending and e-commerce gateways.

Metaverse

Users can communicate with users and engage in economic activities while enjoying various contents in the metaverse provided by SBT.

EVM(Ethereum Virtual Machine)

SBT implemented its own mainnet using EVM. Data is managed directly by SBT using the tree data structure.

SBT AI

SBT is a blockchain platform with the speed and intelligence of various DApps with AI framework.

NFT

SBT is an Ethereum network-based platform that applies ERC-721 technology to guarantee ownership of NFT products within the SBT platform.

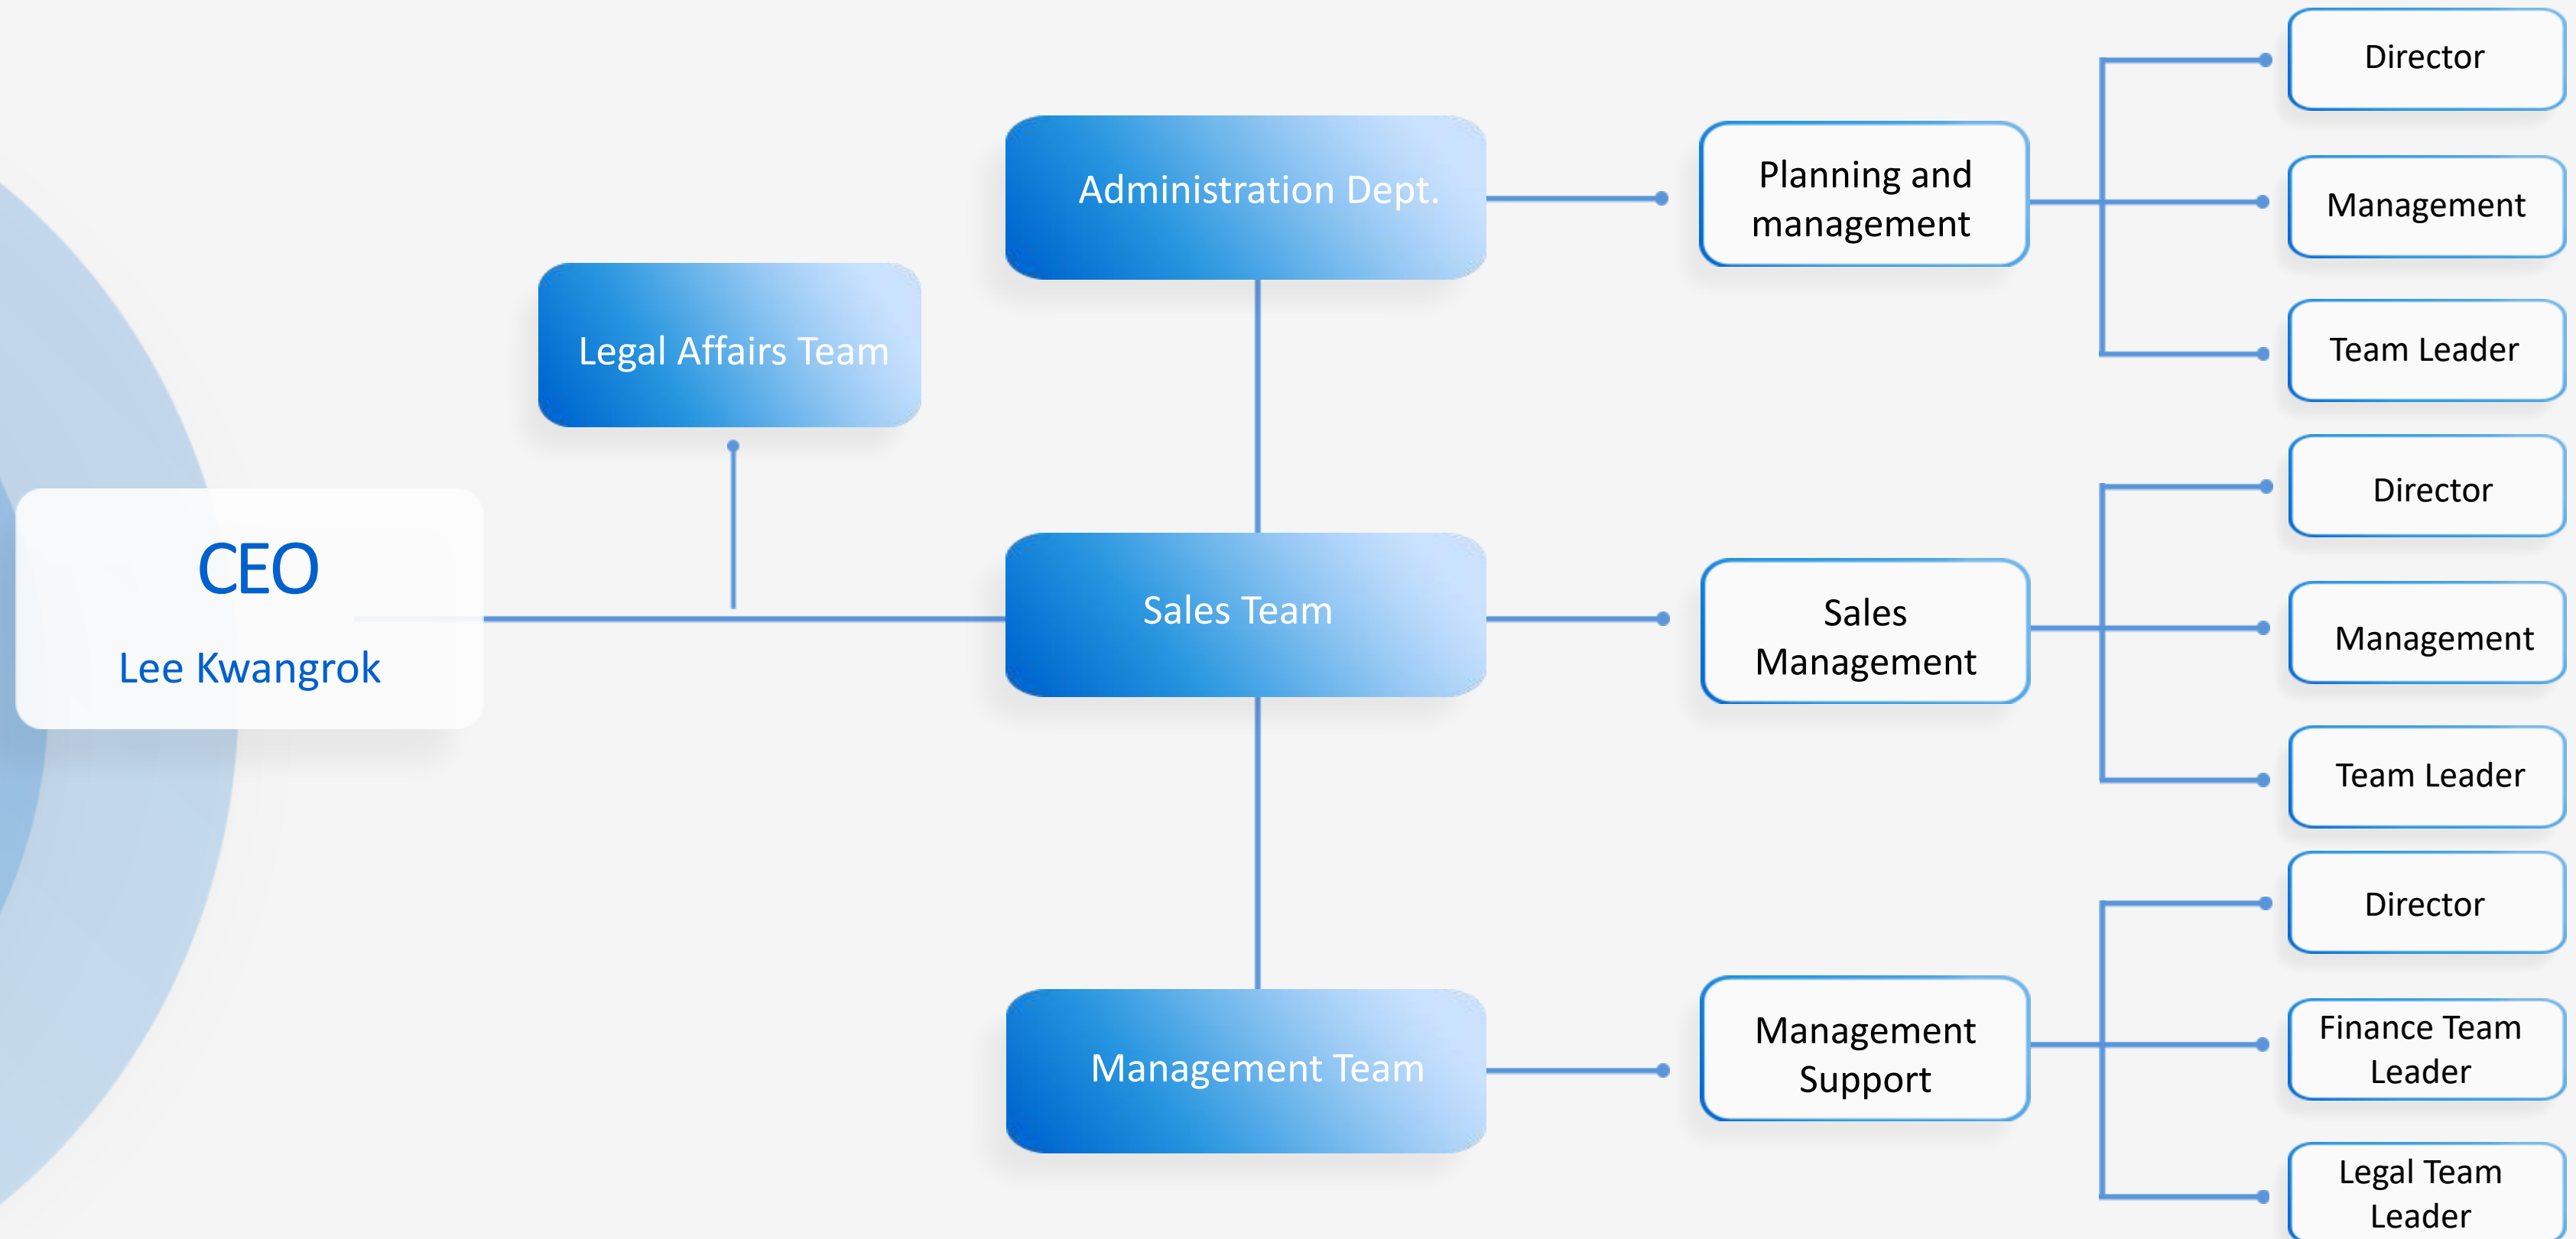

NFT Custody

SBT provides an NFT custody service that safely stores and manages digital assets owned by corporations, including cryptocurrencies.
